Profile Summary

I am Dhenesh Kumar. I completed my B.E. in Electrical and Electronic Engineering at Anna University in 2020. I have around 3 years of experience in front-end web development, having worked on over two UX client projects including e-commerce and medical websites at my previous company. My skills include React.js, Node.js, jQuery, C++, Python, and .NET.

Education

B.Tech/B.E., 2020

Anna University

12th, 2017

Diploma, English

10th, 2014

Tamil Nadu, Tamil

Work Experience

Oct 2021 - Feb 2024

Front End Developer
GoWebEz

I have two and a half years of experience in React.js and Angular.js, specializing in creating dynamic and responsive user interfaces. I have a strong track record of collaborating with cross-functional teams and seamlessly integrating innovative web solutions. On the backend, I am proficient in Laravel PHP framework, Node.js, Python, and .NET. For data management systems, I have worked with MongoDB and MySQL. In mobile app development, I have utilized React Native for both iOS and Android versions. Regarding code flow control, I have experience with Git and Bitbucket version control tools.

Jul 2020 - May 2021

CNC Operator
Kumaran Fishnets

I have 10 months experience in machine operating work. I have worked 3 phase induction motor.

Projects

10 Months

Inflowcare-Caregiver

Inflowcare-caregiver is a comprehensive software solution for homecare, focusing on patient intake and caregiver onboarding, developed using React.js and TypeScript for the frontend. The site is entirely built with React.js and TypeScript, with the structure and design derived from JSON data. On the backend, Node.js is used, and MySQL serves as the data management system. I have experience working on both frontend and backend aspects of this project, including state management between components and global states. For HTTP methods such as GET, POST, DELETE, UPDATE, and HEAD, I utilized Axios for writing API methods.

10 Months

Tracker

Tracker is a website designed to monitor employee attendance and absenteeism, developed using HTML, CSS, Sass, Bootstrap, and React.js. On the backend, PHP Laravel has been utilized for this project.

6 Months

Robotics

For a robotics website project, the front end development involves creating an engaging user interface with react js and JavaScript. This includes describing their functionalities. In backend side node js, python and mangodb is used for this project.

3 Months

Four51

It's an e-commerce website. The site is designed and developed using Angular for the frontend, specifically version 14 or higher. It is a multi-page website with user accounts. For backend development, .NET is used, and the data management system is MySQL.
