

Objective

Front-End Developer with 3+ years of experience in building responsive and scalable web applications using Angular, React.js, TypeScript, JavaScript, and .NET technologies. Skilled in developing user-friendly interfaces, integrating REST APIs, and collaborating in Agile teams. Seeking a challenging opportunity to leverage my technical expertise and contribute to innovative projects while continuing to grow as a software professional.

- Experience
- Gowebez software solutions

Junior Front end developer

Oct - 2021 - Feb -2025

 - Developed responsive web applications using React.js, Angular, TypeScript, JavaScript, HTML, CSS, and Bootstrap.
 - Built reusable and scalable UI components following modern frontend development practices.
 - Managed application state using Redux and Redux Toolkit for predictable data flow and improved maintainability.
 - Developed and integrated RESTful APIs using Node.js and Express.js.
 - Worked with MySQL databases, including CRUD operations, query optimization, and data management.
 - Implemented authentication and authorization features.
 - Collaborated with UI/UX designers, backend developers, and QA teams in Agile/Scrum environments.
 - Improved application performance through code optimization, lazy loading, and component reusability.
 - Used Git, GitHub, and Postman for version control and API testing.
 - Frontend: React.js, Redux, Angular, TypeScript, JavaScript, HTML5, CSS3, Bootstrap.

Nohitatu Technology software solutions

Front end developer

Dec -2025 - Current

 - Developing and maintaining enterprise web applications using Angular, TypeScript, and .NET 8 Web API.
 - Building reusable Angular components, reactive forms, custom validators, and shared modules.
 - Consuming and integrating RESTful APIs developed with .NET 8.
 - Implementing authentication, authorization, and role-based access control.
 - Working with SQL Server databases, stored procedures, and data-driven reporting features.
 - Collaborating with backend developers, QA engineers, and business stakeholders in Agile/Scrum environments.
 - Troubleshooting production issues, fixing bugs, and enhancing application performance.
 - Using Git for version control and following clean coding and code review practices.
 - Participating in requirement analysis, development, testing, and deployment activities.

Projects

InflowCare

Inflowcare is a healthcare and insurance management application designed to streamline patient intake, medical information collection, and insurance verification processes. The system enables patients to submit medical details through digital intake forms while allowing healthcare providers and insurance teams to manage patient records efficiently.

Responsibilities:

- Developed responsive user interfaces using React.js, TypeScript/JavaScript, HTML, CSS, and Bootstrap.

- Implemented patient intake forms with dynamic validations and conditional workflows.
- Managed application state using Redux for efficient data handling across modules.
- Developed and integrated RESTful APIs using Node.js and Express.js.
- Worked with MySQL database for patient, appointment, and insurance-related data management.
- Implemented secure form submission, data validation, and error handling.
- Collaborated with backend developers, QA engineers, and business stakeholders in an Agile environment.
- Optimized application performance and improved user experience through reusable components.

Key Features:

- Patient Registration & Intake Forms
- Insurance Information Management
- Medical History Collection
- Appointment and Patient Record Management
- Role-Based Access Control
- Responsive and User-Friendly Interface

Phicure

Project Description: Phicure is a healthcare insurance platform that helps manage insurance claims, patient eligibility, and payment processing. The application enables healthcare providers and insurance companies to handle coverage details, claim calculations, and patient financial responsibilities efficiently.

Responsibilities:

- Developed responsive user interfaces using Angular, TypeScript, HTML, CSS, and Bootstrap.
- Integrated .NET Web APIs for insurance and patient data management.
- Implemented modules related to insurance benefits, claims processing, and payment calculations.
- Developed screens for managing Deductibles, Copays, Coinsurance, Payers, and Carriers.
- Consumed REST APIs and handled data validation, error handling, and business rule implementation.
- Collaborated with business analysts, QA teams, and backend developers to deliver new features.
- Maintained reusable components and optimized application performance.

Key Insurance Concepts Implemented:

- Deductible: Amount a patient pays before insurance coverage begins.
- Copay: Fixed amount paid by the patient for healthcare services.
- Coinsurance: Percentage of medical costs shared between patient and insurer.
- Payer: Insurance company responsible for claim payments.
- Carrier: Insurance provider managing healthcare plans and coverage.

Technologies Used: Angular, TypeScript, .NET, SQL Server, REST APIs, HTML5, CSS3, Bootstrap, SVN.
